** Composition of Elution Buffer BE: 5 mM Tris/HCl, pH 8.5
1.2 Reagents, consumables, and equipment to be supplied by user

Reagents

- 96–100 % ethanol

Consumables

- 1.5 mL or 2 mL microcentrifuge tubes for microbial sample sedimentation
- Disposable tips

Equipment

- Manual pipettors
- Centrifuge for microcentrifuge tubes
- Vortex mixer
- Sample disruption device: swing mill or similar device (e.g., Mixer Mill MM200, MM300, MM400 (Retsch®); FastPrep® System (MP-Biomedicals); Precellys® (Bertin Technologies); MagNA Lyser (Roche); TissueLyser (QIAGEN); Bullet Blender® (Next Advance); Mini-Beadbeater (Biospec Products); Speed Mill (Analytik Jena); Vortex Adapter for Vortex-Genie® 2 X (MoBio))
- Personal protection equipment (lab coat, gloves, goggles)

1.3 About this user manual

It is strongly recommended for first time users to read the detailed protocol sections of the NucleoSpin® Microbial DNA kit before using this product. Experienced users, however, may refer to the Protocol at a glance instead. The Protocol at a glance is designed to be used only as a supplemental tool for quick referencing while performing the purification procedure.

All technical literature is available online at www.mn-net.com.

Please contact Technical Service regarding information about any changes to the current user manual compared with previous revisions.
2 Product description

2.1 The basic principle

The NucleoSpin® Microbial DNA kit is designed for efficient isolation of genomic DNA from microbial samples. DNA can be isolated from a wide variety of microorganisms such as gram negative, and gram positive bacteria as well as yeast, e.g., *Escherichia coli*, *Bacillus subtilis*, *Corynebacterium glutamicum*, *Saccharomyces cerevisiae*. Preparation of the collected samples containing the microbes of interest should be in pellet format.

Preliminary data also indicate the usability of the kit for DNA isolation from fungal mycelia, e.g., *Aspergillus nidulans*, from bacterial spore suspensions, e.g., *Geobacillus stearothermophilus*, and from plant pollen, e.g., honey bee pollen baskets. For optimal DNA yield, bead tubes different from the ones included in the kit might be required for such applications (see section 2.4).

Microbial samples such as gram positive bacteria, yeast, and spores can be difficult to lyse due to their strong complex cell wall structures. The NucleoSpin® Microbial DNA kit replaces enzymatic lysis by utilizing mechanical disruption of cell wall structures with the NucleoSpin® Bead Tubes. The NucleoSpin® Bead Tubes can be used in combination with many compatible disruptive devices (see section 2.4.1). High DNA yields can be obtained with the NucleoSpin® Bead Tubes from a large variety of sample types – enabling the procedure to be convenient, fast, and easy. Alternative bead types can be ordered separately for select sample types (see section 2.4.2 for recommendations).

2.3 Handling, preparation, and storage of starting materials

Cells should be harvested from fresh microbial cultures by sedimentation via centrifugation. Supernatant should be removed by aspiration. Microbial cell pellets can be used fresh or stored at -20 °C to -80 °C before starting DNA isolation.

2.4 Lysis and disruption of sample material

In order to obtain optimal yields of DNA from sample material, a complete disruption of the sample material is necessary. Sample disruption efficiency depends on the following parameters and can be achieved by following suggestions outlined in the subsequent sections.
2.4.1 Disruption device

The following devices are compatible with NucleoSpin® Bead Tubes. Please check whether NucleoSpin® Bead Tubes can be accommodated by the available tube adapters prior to starting the procedure.

- MN Bead Tube Holder in combination with the Vortex-Genie® 2 (recommended).
- Mixer Mill MM200, MM300, MM400 (Retsch®) (suitable).

*If other disruption devices (section 1.2) are intended to be used, consider section 2.4.2 and WARNING note in section 2.4.3!*

2.4.2 Type of Bead tube

Bead type, disruption time, and frequency / speed must be optimized for a given sample to obtain maximal DNA yield and quality.

**Type of Bead tube**

- NucleoSpin® Bead Tubes Type A (0.6–0.8 mm ceramic beads)
  Recommended for soil, sediment, and stool (included in NucleoSpin® Soil, see ordering information, section 6.2).
- NucleoSpin® Bead Tubes Type B (40–400 μm glass beads)
  Recommended for gram positive and negative bacteria (included in NucleoSpin® Microbial DNA, see ordering information, section 6.2).
- NucleoSpin® Bead Tubes Type C (1–3 mm corundum)
  Recommended for yeast (see ordering information, section 6.2).
- NucleoSpin® Bead Tubes Type D (3 mm steel beads; included in NucleoSpin® DNA Insect kits)
  Recommended for insects, crustaceans, and lipid-rich tissue.
- NucleoSpin® Bead Tubes Type E (combination of 3 mm steel beads and 40–400 μm glass beads)
  Recommended for hard to lyse bacteria within insect or tissue samples (see ordering information, section 6.2).
- NucleoSpin® Bead Tubes Type F (combination of 1-3 mm corundum and 3 mm steel beads; included in NucleoSpin® RapidLyse kits)
  Recommended for challenging tissues, e.g., spleen, or lung tissue.
- NucleoSpin® Bead Tubes Type G (5 mm steel beads)
  Recommended for plant material (see ordering information, section 6.2).

2.4.3 Time and frequency of disruption

The following recommendations have been established for the MN Bead Tube Holder in combination with a Vortex-Genie® 2 or a Retsch® Mixer Mill MM300 operating at highest frequency (30 Hertz). *For using other disruption devices, and other sample materials, time and frequency have to be optimized.*
Time and frequency of disruption using MN Bead Tube Holder on a Vortex Genie® 2

As a general starting point disrupt microbial samples for 20 min using MN Bead Tube Holder on a Vortex Genie® 2.

Time an frequency of disruption using a Retsch® Mixer Mill MM300

</tbody>
</table>

**Note:** Performance and stability testing has been conducted on the NucleoSpin® Bead Tubes A, B, and C on a Retsch® Mixer Mill MM300 at highest frequency (30 Hertz) for up to 15 minutes for optimal sample disruption, avoidance of DNA fragmentation, and tube durability. Other disruption devices (see section 2.4.1) will require different settings regarding frequency and duration for optimal performance with the selected sample material. Please note that the position of the tube within the machine (Retsch® Mixer Mill) is important for optimal performance! Please consult instruction manual of the machine.

**WARNING:** Many modern disruption devices can cause very high energy input in bead tubes. Depending on bead tube type and content (beads, liquid volume, sample type), especially high frequency of shaking and/or long shaking duration can cause breaking up of the bead tubes! **It is the responsibility of the user to perform initial stability test for the used bead tubes under the conditions used!** Perform initial test with water instead of lysis buffer and moderate machine setting (low frequency, short time) in order to avoid spillage of chaotropic lysis buffer in case of tube breakage.

**WARNING:** In section 5 a certain liquid volume during disruption is recommended. The reduction of liquid will severely increase the mechanical impact of the grinding matrix and can result in damage of DNA and tube (especially if NucleoSpin® Bead Tubes D and E are used).
2.5 Elution procedures

In addition to the standard method, several modifications are possible to increase yield, concentration, and convenience.

- **Convenient elution (standard elution):** For convenience, elution can be performed by one time addition of 100 μL elution buffer onto the column.

- **High yield:** Two serial elutions of 100 μL each for total elution volume of 200 μL.

- **High concentration:** Use initial 100 μL eluate for second elution – 100 μL total elution volume, 2 elutions.

3 Storage conditions and preparation of working solutions

Attention:

*Lysis Buffer MG and Wash Buffer BW contain chaotropic salt! Wear gloves and goggles!*

CAUTION: Buffers MG and BW contain chaotropic salts which can form highly reactive compounds when combines with bleach (sodium hypochlorite). DO NOT add bleach or acidic solutions directly to the sample-preparation waster!

- All kit components can be stored at room temperature (18–25 °C) and are stable for at least one year.

Before starting any **NucleoSpin® Microbial DNA** protocol, prepare the following:

- **Wash Buffer B5:** Add the indicated volume of ethanol (96–100 %) to **Wash Buffer B5 Concentrate**. Mark the label of the bottle to indicate that ethanol was added. Wash Buffer B5 can be stored at room temperature (18–25 °C) for at least one year.

- **Liquid Proteinase K** is ready to use. After first time use, store **Liquid Proteinase K** at 4 °C or -20 °C.

**Hazard phrases**

H226 Flammable liquid and vapour.

H302 Harmful if swallowed.

H317 May cause an allergic skin reaction.

H319 Causes serious eye irritation.

H336 May cause drowsiness or dizziness.

H412 Harmful to aquatic life with long lasting effects.

EUH031 Contact with acids liberates toxic gas.

**Precaution phrases**
Genomic DNA from microorganisms

P210 Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.

P233 Keep container tightly closed.
Behälter dicht verschlossen halten.

P260 Do not breathe dust/fume/gas/mist/vapours/spray.
Staub/Rauch/Gas/Nebel/Dampf/Aerosol nicht einatmen.

P261 Avoid breathing dust/fume/gas/mist/vapours/spray.
Einatmen von Staub/Rauch/Gas/Nebel/Dampf/Aerosol vermeiden.

P264 Wash … thoroughly after handling.
Nach Handhabung … gründlich waschen.

P272 Contaminated work clothing should not be allowed out of the workplace.
Kontaminierte Arbeitskleidung nicht außerhalb des Arbeitsplatzes tragen.

P273 Avoid release to the environment.
Freisetzung in die Umwelt vermeiden.

P280 Wear protective gloves/protective clothing/eye protection/face protection.
Schutzhandschuhe/Schutzkleidung/Augenschutz/Gesichtsschutz tragen.

P301+312 IF SWALLOWED: Call a POISON CENTER/ doctor/…/ if you feel unwell.
BEI VERSCHLUCKEN: Bei Unwohlsein GIFTINFORMATIONSZENTRUM/Arzt/… anrufen.

P302+352 IF ON SKIN: Wash with plenty of water/…
BEI BERÜHRUNG MIT DER HAUT: Mit viel Wasser/… waschen.

P305+351+338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

P330 Rinse mouth.
Mund ausspülen.

P333+313 If skin irritation or rash occurs: Get medical advice/attention.
Bei Hautreizung oder -ausschlag: Ärztlichen Rat einholen/ärztliche Hilfe hinzuziehen.

P337+313 If eye irritation persists: Get medical advice/attention.
Bei anhaltender Augenreizung: Ärztlichen Rat einholen/ärztliche Hilfe hinzuziehen.

P363 Wash contaminated clothing before reuse.
Kontaminierte Kleidung vor erneutem Tragen waschen.

P370+378 In case of fire: Use … to extinguish.
Bei Brand: … zum Löschen verwenden.

P403+235 Store in a well-ventilated place. Keep cool.
An einem gut belüfteten Ort aufbewahren. Kühl halten.

Das auf Etiketten dargestellte Symbol weist auf weitere Sicherheitsinformationen dieses Kapitels hin.
5 Protocols

5.1 Protocol for gram positive and gram negative bacteria

Before starting the preparation:
- Check if Buffer B5 was prepared according to section 3.
- Check section 2.4 for lysis and disruption of sample material.

1 Prepare sample

Harvest cells from a culture by centrifugation in a microcentrifuge tube (not provided). Discard supernatant.

*Up to approximately 40 mg of wet weight microbial cell culture pellet can be used as sample material.*

Add 100 μL Elution Buffer BE and resuspend cells.

*Alternatively, high quality grade water (not provided) can be used.*

2 Lyse sample

Transfer the cell suspension into the NucleoSpin® Bead Tube Type B (provided).

Add 40 μL Buffer MG. Then, add 10 μL Liquid Proteinase K and close the tube.

*Note: It is not necessary to vortex here.*

**Agitate** the NucleoSpin® Bead Tube on a swing mill or similar device.

*Note: Optimal agitation duration, speed/frequency depends on the machine used. On a Retsch® Mixer Mill MM200, MM300, MM400, e.g., 4 min at maximal frequency (30 Hertz) is adequate for E. coli, 12 min for B. subtilis (see section 2.4). On the swing mill, position of the tube in the mill can considerably influence the result. Please consult the instruction manual of the device used.*

Centrifuge the NucleoSpin® Bead Tube 30 s at 11,000 x g to clean the lid.

*Note: In this step foam is displaced from the screw cap, so that the cap can be removed in a clean way.*
3 Adjust DNA binding conditions

Add 600 μL Buffer MG and mix (e.g., vortex for 3 s).

*Note:* Glass beads should be resuspended; some residual pellet (cell debris) may remain on the bottom of the tube.

Centrifuge for 30 s at 11,000 x g.

*Note:* This centrifugation step is performed in order to clean the lid and sediment glass beads and cell debris.

4 Bind DNA

Transfer the supernatant (~500–600 μL) onto the NucleoSpin® Microbial DNA Column, placed in a 2 mL Collection Tube (provided).

Centrifuge for 30 s at 11,000 x g. Discard collection tube with flowthrough. Put column into a fresh Collection Tube (2 mL, provided).

5 Wash silica membrane

1st wash

Add 500 μL Buffer BW. Centrifuge for 30 s at 11,000 x g. Discard flowthrough and place the column back into the Collection Tube.

2nd wash

Add 500 μL Buffer B5 to the column and centrifuge for 30 s at 11,000 x g. Discard flowthrough and place the column back into the Collection Tube.

6 Dry silica membrane

Centrifuge the column for 30 s at 11,000 x g.

*Note:* Residual wash buffer is removed in this step.
7 Elute highly pure DNA

Place the NucleoSpin® Microbial DNA Column into a 1.5 mL nuclease-free tube (not provided) and add 100 μL Elution Buffer BE onto the column. Incubate at room temperature for 1 min. Centrifuge 30 s at 11,000 x g.

For alternative elution procedures see section 2.5.

5.2 Protocol for yeast (e.g., *Saccharomyces cerevisiae*)

Optimal DNA yields from yeast samples can be obtained by following the standard protocol using NucleoSpin® Bead Tube Type C (see ordering information on section 6.2) instead of NucleoSpin® Bead Tube Type B provided with the NucleoSpin® Microbial DNA kit.

The agitation is recommended at a Retsch® Mixer Mill MM300: 12 min at 30 Hz. For other disruption devices, please check section 2.4. Please note that the position of the tube within the machine is important for optimal performance, please consult instruction manual of the machine.

If bead carryover is observed in the eluate, transfer the eluate into a new 1.5 mL nuclease-free tube carefully avoid disturbing the pellet.
6 Appendix

6.1 Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause and suggestions</th>
</tr>
</thead>
<tbody>
<tr>
<td>No or poor DNA yield</td>
<td><strong>Incomplete lysis</strong>&lt;br&gt;• Adjust lysis conditions (bead tube type, agitation device, duration, or frequency).&lt;br&gt;&lt;br&gt;<strong>Reagents not applied properly</strong>&lt;br&gt;• Prepare Buffer B5 according to instructions (section 3).&lt;br&gt;&lt;br&gt;<strong>Suboptimal elution of DNA from the column</strong>&lt;br&gt;• For certain sample types, preheat Buffer BE to 70 °C before elution. Apply Buffer BE directly onto the center of the silica membrane.&lt;br&gt;• Elution efficiencies decrease dramatically, if elution is done with buffers with a pH &lt; 7.0. Use slightly alkaline elution buffers like Buffer BE (pH 8.5).&lt;br&gt;• Especially when expecting high yields from large amounts of material, we recommend elution with 200 μL Buffer BE and incubation of the closed columns in an incubator at 70 °C for 5 min before centrifugation.</td>
</tr>
<tr>
<td>Poor DNA quality</td>
<td><strong>High $A_{260}/A_{280}$ ratio</strong>&lt;br&gt;• Ratios &gt; 1.9 can be caused by RNA contamination. Usually, such RNA contamination do not interfere with downstream application. Depending on sample type, amount, and disruption procedure, preparations might contain small amounts of RNA. If it is necessary to reduce RNA contamination to the lowest possible level, incubate the lysate after the disruption step for 5 min at 70 °C in order to inactivate the Proteinase K. After cooling to room temperature, add 20 μL RNase A (20 mg/mL) and incubate 5 min. Continue with the application of the lysate onto the column.</td>
</tr>
</tbody>
</table>
Problem | Possible cause and suggestions
---|---
Suboptimal performance of genomic DNA in enzymatic reactions | **Carry-over of ethanol or salt**
- Make sure to centrifuge at least 1 min at 11,000 x g in order to remove all of ethanolic Buffer B5 before eluting the DNA. If, for any reason, the level of Buffer B5 has reached the column outlet after drying, repeat the centrifugation.
- Do not chill Buffer B5 before use. Cold buffer will not remove salt effectively. Equilibrate Buffer B5 to room temperature before use.

Contamination of DNA with inhibitory substances
- Do not elute DNA with TE buffer. EDTA may inhibit enzymatic reactions. Repurify DNA and elute in Buffer BE.

6.3 Product use restriction / warranty

NucleoSpin® Microbial DNA kit components are intended, developed, designed, and sold FOR RESEARCH PURPOSES ONLY, except, however, any other function of the product being expressly described in original MACHEY-NAGEL product leaflets.

MACHEY-NAGEL products are intended for GENERAL LABORATORY USE ONLY! MACHEY-NAGEL products are suited for QUALIFIED PERSONNEL ONLY! MACHEY-NAGEL products shall in any event only be used wearing adequate PROTECTIVE CLOTHING. For detailed information please refer to the respective Material Safety Data Sheet of the product! MACHEY-NAGEL products shall exclusively be used in an ADEQUATE TEST ENVIRONMENT. MACHEY-NAGEL does not assume any responsibility for damages due to improper application of our products in other fields of application. Application on the human body is STRICTLY FORBIDDEN. The respective user is liable for any and all damages resulting from such application.

DNA/RNA/PROTEIN purification products of MACHEY-NAGEL are suitable for IN VITRO-USES ONLY!

ONLY MACHEY-NAGEL products specially labeled as IVD are also suitable for IN VITRO-diagnostic use. Please pay attention to the package of the product. IN VITRO-diagnostic products are expressly marked as IVD on the packaging.

IF THERE IS NO IVD SIGN, THE PRODUCT SHALL NOT BE SUITABLE FOR IN VITRO-DIAGNOSTIC USE!

ALL OTHER PRODUCTS NOT LABELED AS IVD ARE NOT SUITABLE FOR ANY CLINICAL USE (INCLUDING, BUT NOT LIMITED TO DIAGNOSTIC, THERAPEUTIC AND/OR PROGNOSTIC USE).

No claim or representations is intended for its use to identify any specific organism or for clinical use (included, but not limited to diagnostic, prognostic, therapeutic, or blood banking). It is rather in the responsibility of the user or - in any case of resale of the products - in the responsibility of the reseller to inspect and assure the use of the DNA/RNA/protein purification products of MACHEY-NAGEL for a well-defined and specific application.

MACHEY-NAGEL shall only be responsible for the product specifications and the performance range of MN products according to the specifications of in-house quality control, product documentation and marketing material.

This MACHEY-NAGEL product is shipped with documentation stating specifications and other technical information. MACHEY-NAGEL warrants to meet the stated specifications. MACHEY-NAGEL’s sole obligation and the customer’s sole remedy is limited to replacement of products free of charge in the event products fail to perform as warranted. Supplementary reference is made to the general business terms and conditions of MACHEY-NAGEL, which are printed on the price list. Please contact us if you wish to get an extra copy.

There is no warranty for and MACHEY-NAGEL is not liable for damages or defects arising in shipping and handling (transport insurance for customers excluded), or out of accident or improper or abnormal use of this product; defects in products or
components not manufactured by MACHELEY-NAGEL, or damages resulting from
such non-MACHELEY-NAGEL components or products.

MACHELEY-NAGEL makes no other warranty of any kind whatsoever, and
SPECIFICALLY DISCLAIMS AND EXCLUDES ALL OTHER WARRANTIES OF
ANY KIND OR NATURE WHATSOEVER, DIRECTLY OR INDIRECTLY, EXPRESS
OR IMPLIED, INCLUDING, WITHOUT LIMITATION, AS TO THE SUITABILITY,
REPRODUCTIVITY, DURABILITY, FITNESS FOR A PARTICULAR PURPOSE
OR USE, MERCHANTABILITY, CONDITION, OR ANY OTHER MATTER WITH
RESPECT TO MACHELEY-NAGEL PRODUCTS.

In no event shall MACHELEY-NAGEL be liable for claims for any other damages,
whether direct, indirect, incidental, compensatory, foreseeable, consequential, or
special (including but not limited to loss of use, revenue or profit), whether based upon
warranty, contract, tort (including negligence) or strict liability arising in connection
with the sale or the failure of MACHELEY-NAGEL products to perform in accordance
with the stated specifications. This warranty is exclusive and MACHELEY-NAGEL
makes no other warranty expressed or implied.

The warranty provided herein and the data, specifications and descriptions of this
MACHELEY-NAGEL product appearing in MACHELEY-NAGEL published catalogues
and product literature are MACHELEY-NAGEL’s sole representations concerning
the product and warranty. No other statements or representations, written or oral,
by MACHELEY-NAGEL’s employees, agent or representatives, except written
statements signed by a duly authorized officer of MACHELEY-NAGEL are authorized;
they should not be relied upon by the customer and are not a part of the contract of
sale or of this warranty.

Product claims are subject to change. Therefore please contact our Technical Service
Team for the most up-to-date information on MACHELEY-NAGEL products. You
may also contact your local distributor for general scientific information. Applications
mentioned in MACHELEY-NAGEL literature are provided for informational purposes
only. MACHELEY-NAGEL does not warrant that all applications have been tested in
MACHELEY-NAGEL laboratories using MACHELEY-NAGEL products. MACHELEY-
NAGEL does not warrant the correctness of any of those applications.
