

MACHEREY-NAGEL

Gold standard plasmid DNA purification

NucleoBond® Xtra Midi/Maxi EF

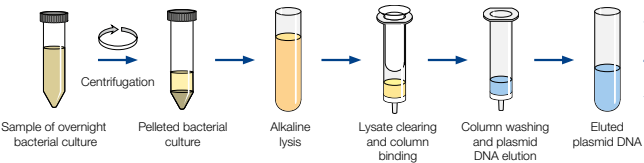

- Results you can trust
- Flawless transfections
- Save time, focus on science

NucleoBond® Xtra at a glance

Outstanding yields and pure plasmid DNA

The NucleoBond® Xtra product series represents our second generation of anion-exchange chromatography column kits designed for the extraction of plasmid DNA. They are distinguished by their use of column filters and specially formulated resin, which facilitates rapid processing at gravity flow.

Workflow overview

Our NucleoBond® Xtra columns are available in Midi and Maxi sizes, offering regular yields of up to 500 µg and 1000 µg of plasmid DNA, respectively. Furthermore, kits for both columns sizes are available in different variations, offering different levels of endotoxin removal and/or including additional syringe filters for desalting.

Ordering information

Product	Preps	REF
■ NucleoBond® Xtra Midi EF	10 / 50	740420.10 / .50
■ NucleoBond® Xtra Midi Plus EF*	10 / 50	740422.10 / .50
■ NucleoBond® Xtra Maxi EF	10 / 50	740424.10 / .50
■ NucleoBond® Xtra Maxi Plus EF*	10 / 50	740426.10 / .50

* NucleoBond® Xtra Plus kits contain NucleoBond® Finalizer for plasmid desalination and concentration.

Comparative data

Proven high yield, low endotoxin levels and short preparation time

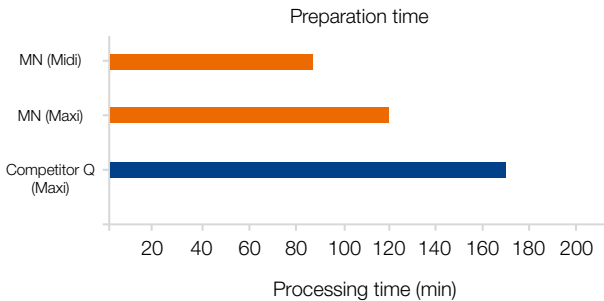

NucleoBond® Xtra columns consistently outperform other anion exchange columns on the market in terms of yield and speed. From simple transfections to cutting-edge applications, the NucleoBond® Xtra kits provide you with a solid and reliable baseline for your research.

Direct comparison of total plasmid yields (pcDNA3.1) grown in LB medium isolated with NucleoBond® Xtra Midi EF and Maxi EF as well as different competitor kits according to the respective user manual.

Endotoxins in EU/µg DNA determined after plasmid DNA isolation with NucleoBond® Xtra Midi EF and Maxi EF show levels below the FDA limit for vaccines (< 0.04 EU/µg DNA).

Processing times of NucleoBond® Xtra Midi EF and Maxi EF compared to competitor Q, including the desalting step by isopropanol precipitation.
