PF-12^{Plus} passes vibration-shock test

The PF-12^{Plus} compact photometer from MACHEREY-NAGEL can be used even under the toughest conditions. The German Army's institute for defense technology (*Wehrwissenschaftliches Institut der Bundeswehr*) has officially confirmed these attributes in an independent evaluation.

During a several hour long testing procedure, the PF-12^{Plus} was submitted to a vibration-shock test at multiple frequencies. Even after such extreme conditions, the instrument is still fully functional. Thus, the PF-12^{Plus} is the only photometer in its class that complies with the strict requirements of the German Army according to *MIL-STD 810C* (test specification 514.2).

With its officially confirmed robustness, the compact size and its certified resistance to water and dust according to IP 68, the photometer PF-12^{Plus} is the most rugged compact photometer in the market. Paired with the intuitive user guidance and the large variety of tests, using the instrument in extreme environmental conditions is easy, quick and efficient.

Ordering information

Description	REF
Photometer PF-12 ^{Plus} incl. software DVD, quick reference guide, manual "VISOCOLOR® ECO Test instructions for compact photometer PF-12 ^{Plus} ", 4 batteries, 4 empty test tubes, funnel, beaker, syringe, USB cable, calibration cuvette, certificate and cleaning cloth in stable case	919250
