

# MACHEREY-NAGEL

## Plasmid DNA – From Purification to Vaccination

June 1st, 2022, Wednesday, 8:00 am / 4:00 pm (CEST)

### About the Webinar

Plasmid purification is among the most common techniques used in molecular biology labs and the demand for high quality plasmid DNA has increased vastly in response to rapid advances in its use in gene therapy and vaccine production. New applications like mRNA based vaccines or gene therapy treatment all require plasmid DNA as an important starting material.

In this webinar, we will share tips to help maximize your plasmid DNA yields and purity for important applications such as vaccine and AAV production which demand the highest quality DNA for successful implementation.
